Agenda

Introduction

Project Overview

Exploratory Data Analysis

Key Performance Indicators

Hypothesis Testing

Recommendations

Introduction

Background: Vanguard aim to improve client's experience by implementing a modern User Interface (UI), coupled with timely in-context prompts.

Experiment:

- Between 15th March 2017 to 20th June 2017
- A/B test conducted
- Control group: previous UI
- Test group: updated UI

Problem Statement:

Does the updated UI boost client's overall engagement and user experience?

Project Overview

Merging 3 Datasets

- Client Profile
- Digital Footprint
- Experiment Roster

Null Values

- Rows containing null values were dropped prior to analysis

Column Names

- Renaming columns for consistency

Outliers

- Upper and Lower limits were set and values exceed these limits were dropped

Exploratory Data Analysis

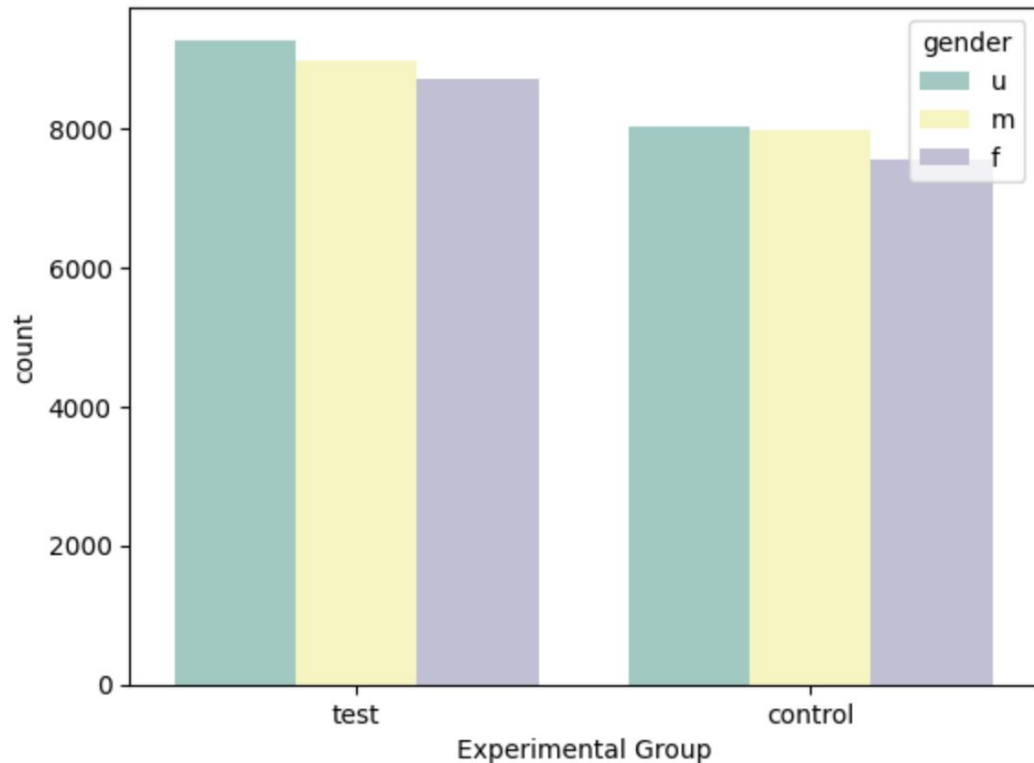

48.5 mean age of clients

32%_f | 33%_m

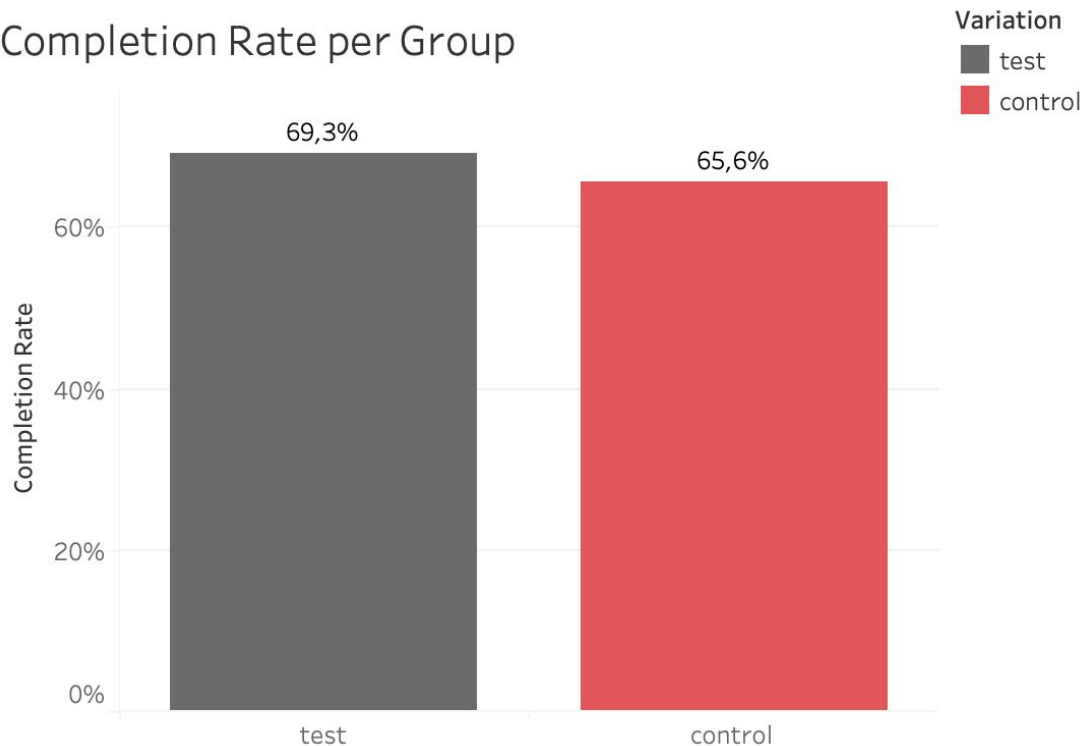

50,487 clients

26,961 test | 23,526 control

KPI 1 - Completion Rate

Completion Rate per Group

3.7% difference

KPI 2 - Step Duration

Average Duration by Group

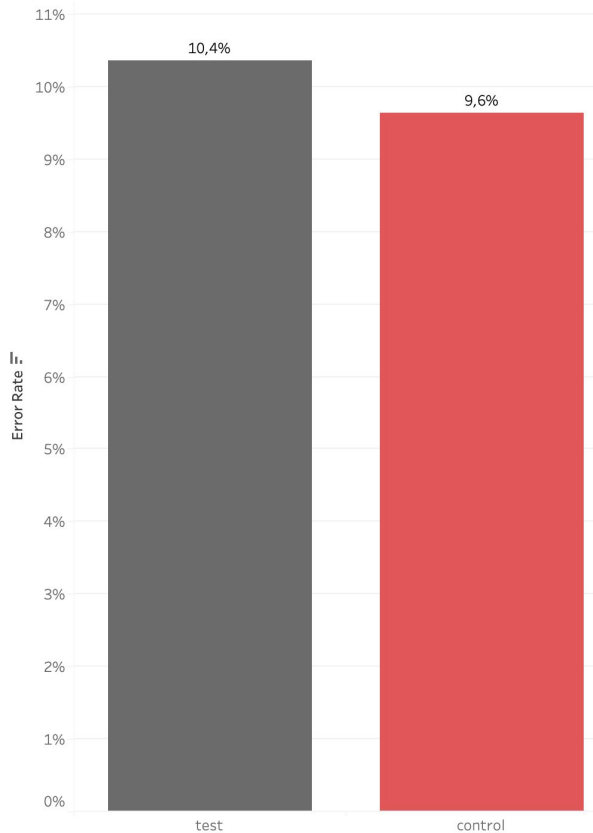

-3s

Average Step Duration by Group

KPI 3 - Error Rate

Error Rate per Group

+ .8%

Average Step Error by Group

Hypothesis Testing

H0: Test group completion rate = Control group completion rate

H1: Test group completion rate \neq Control group completion rate

Z-statistic = 13.253

p-value = 0.000

Outcome: with a Z-statistic of 13.253 and a p-value much smaller than 0.05, there is strong evidence to reject the null hypothesis.

Hypothesis Testing

H0: Test group completion rate = Control group completion rate + 5%

H1: Test group completion rate \neq Control group completion rate + 5%

Z-statistic = -7.218

p-value = 1.000

Outcome: with a Z-statistic of -7.218 and a p-value much greater than 0.05, there is not evidence to reject the null hypothesis.

Recommendations

Final Verdict

- Increased completion rate
 - However, does not meet the 5% threshold
- Lower average duration in test group
- Higher error rates observed in the updated UI
 - Indicates potential issues with in-context prompts

Areas of Improvement

- Future enhancements should look to reduce error rates by improving the prompts
- Longest durations are in step 2 and 3
- Highest error rates also in step 1 and 2

Thank you!
